HIGH-PRECISION, HIGH-EFFICIENCY INTEGRATED MILL TURN CENTER

NTX 2500 3rd Generation
NTX 3000 3rd Generation

NTX 2500 3rd Generation / NTX 3000 3rd Generation

High-quality turn-mill machining of long shafts

The NTX 2500 3rd Generation / NTX 3000 3rd Generation are all-round machines capable of cutting complex-shaped workpieces with high accuracy and efficiency for the aircraft, automotive, and ship industries.

These NTX models possess a large machining area as well as flexible cutting abilities by combining features of turning centers and machining centers. This ensures a wide range of machining from micro machining to cutting of large workpieces.

The efficient integration of processes realizes high-mix low-volume production as well as mass production, and greatly improves profitability.

NTX 2500 3rd Generation / NTX 3000 3rd Generation

High-precision and high-efficiency multitasking machining

The NTX 2500 3rd Generation / NTX 3000 3rd Generation equipped with DMG MORI's newest technologies are capable of integrating various machining processes with high accuracy and superb cutting abilities within a wide machining area.

These models enable 6-face machining with the right spindle to complete all cutting processes on one single machine.

The user interface "ERGOline X" utilizes a touch panel screen and keyboard to easily set up complex turn-mill operations.

The NTX 2500 3rd Generation / NTX 3000 3rd Generation provides the highest level of performance, making it the ideal solution for customers aiming for higher efficiency and cost reduction in their production processes.

High productivity

- + Higher machining flexibility with the turn-mill spindle compactMASTER with a full length of only 350 mm (13.8 in.)
- + Y-axis on Turret 2 <Option> for various use
<±40 mm (1.5 in.)>
- + The B-axis rotation range of 240° and rotation speed of 100 min⁻¹, the X-axis travel of 675 mm <-125 — +550 mm (-4.9 — +21.6)>, the Y-axis travel of 300 mm (11.8 in.)
<±150 mm (5.9 in.)>
- + Turn-mill spindle equipped with Capto C6 as standard, max. spindle speed of 12,000 min⁻¹ & 20,000 min⁻¹ <Option>
- + Right spindle (option) for 6-face machining, and complete machining of parts on one machine
- + Workpiece transfer between left and right spindle possible without removing the automatic steady rest
- + Automatic door as standard for improved workability
- + Max. turning length: 3,029 mm (119.2 in.) <NTX 2500>, 3,018 mm (118.8 in.) <NTX 3000> <Right spindle specifications>

05

Simultaneous 5-axis machining

- + Simultaneous 5-axis machining of complex parts with the direct drive motor (DDM) installed in the B axis

High precision

- + Thoroughly controlled thermal displacement by cooling water circulation in the body
- + Full-closed loop control on all axes <Scale feedback> equipped as standard

High rigidity

- + High-rigidity bed and roller guides

CELOS X Operation System

- + Comprehensive management, documentation and visualization of jobs, machining processes and machine data
- + Expansion of functions possible by adding applications. High affinity with existing information infrastructure and software.

Unique energy-saving function

- + GREENmode for visualizing power saving settings and saving effect

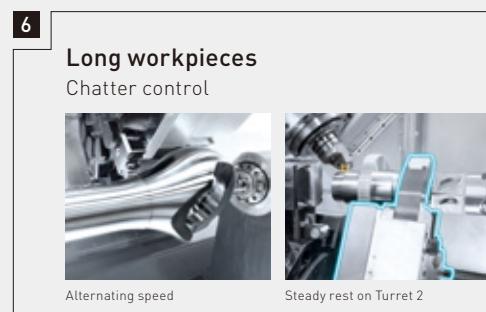

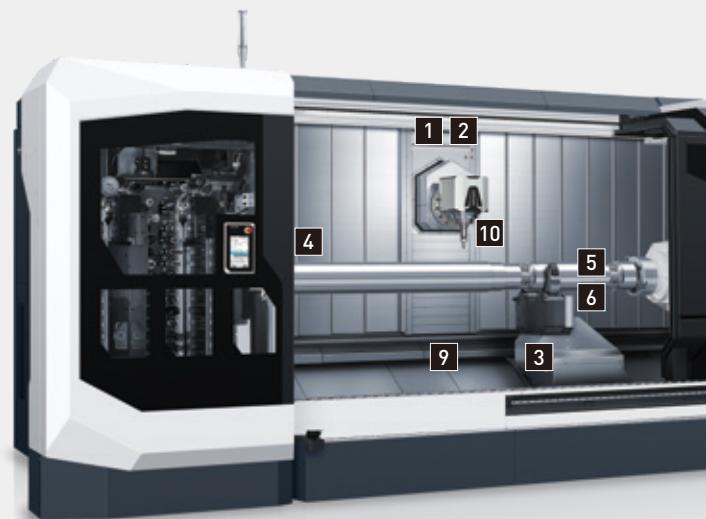

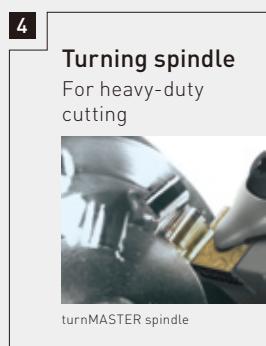

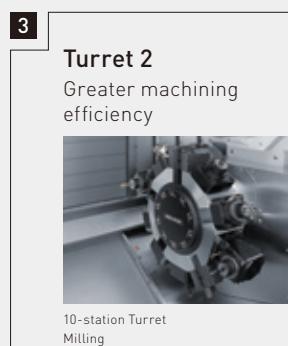

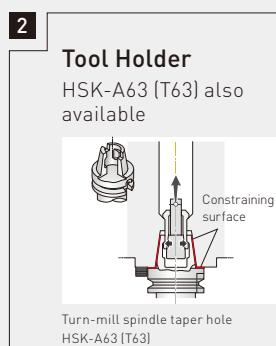

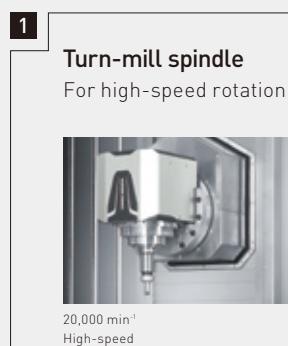

NTX 2500 3rd Generation / NTX 3000 3rd Generation

Various Functions Available for Your Best Choice

Turret 2 (Option) is available for the right spindle (Option) and the tailstock specifications.

Turret 2 comes with a milling and Y-axis function. The NTX 2500 3rd Generation / NTX 3000 3rd Generation offer eight variations for different configurations to respond to the specific needs of all customers.

For long shaft-type workpieces, the steady rest specification can be selected from 3 patterns depending on the machining content.

NTX 2500 3rd Generation / NTX 3000 3rd Generation

Highly rigid structure for maximum machining capacity

DMG MORI pursues high rigidity from the basic designing stage through FEM analysis.

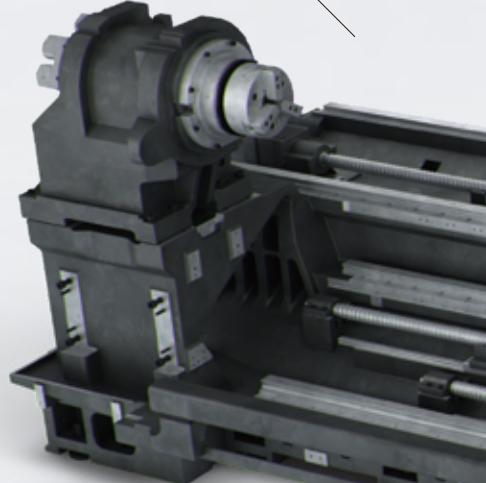

The NTX 2500 3rd Generation / NTX 3000 3rd Generation are equipped with a thick, high-rigidity bed to support the highly rigid turnMASTER spindle, the compactMASTER spindle with a wide range of motion, and Turret 2 for heavy-duty cutting. This maximizes the machining performance.

The models' aging resistance allows them to maintain high-accuracy machining for a long period of time.

High-rigidity Machine Body

- + Thick and high-rigidity bed to stably support the moving units
- + Four sliders at the front bottom of the column
- + High-rigidity body designed using FEM analysis
- + Machine body with high vibration resistance designed by frequency response analysis
- + Roller guides allowing smooth movement and high rigidity for higher positioning accuracy
- + The double anchor method is employed for ball screws and support bearings, which ensures high rigidity for heavy-duty machining and high-accuracy machining.

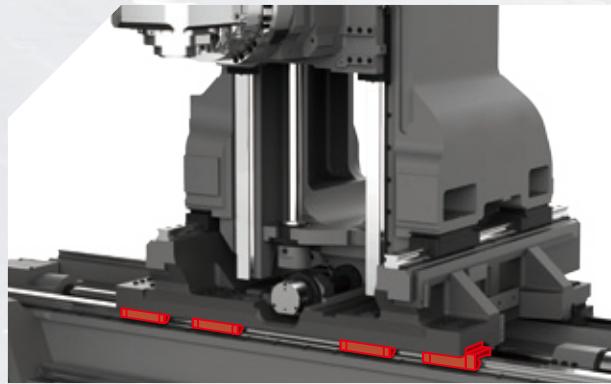

FEM: Finite Element Method

High Accuracy for Long Time

NTX 2500 3rd Generation / NTX 3000 3rd Generation

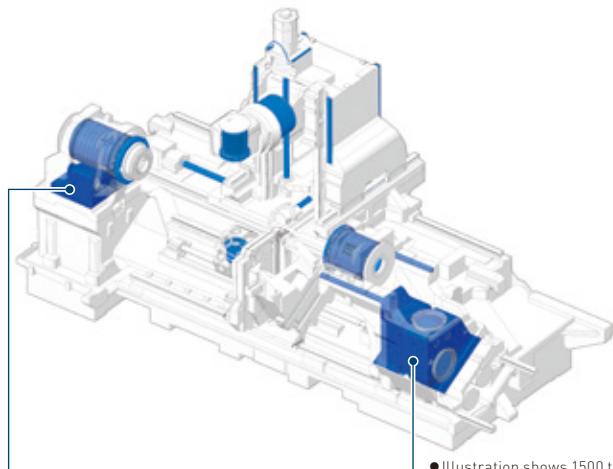

Optimal control of thermal displacement for high-accuracy machining

The 3rd Generation models utilize innovative methods to achieve stable and high-accuracy machining. Thermal displacement is effectively controlled by optimizing the shapes of casting components and the circulation of cooling water in the machine body around heat sources such as spindle and turret motors, ball screws and ball nuts.

Cooling water circulation in the machine body

DMG MORI developed "Cooling water circulation in the machine body" as a new technology against thermal displacement that directly affects machining accuracy. By circulating cooling water around heat sources such as spindle and turret motors, ball screws and ball nuts, this technology effectively minimizes thermal displacements and realizes high-accuracy machining.

Cooling water circulation in the machine body*

*Illustration shows 1500 type.

● Rights obtained in Japan, Germany, the U.S. and China.

Full closed loop control <Scale feedback> (Standard features)

- + Superior machining accuracy with SmartSCALE made by Magnescale
- + Magnetic measuring system with a high resolution of $0.01\mu\text{m}$
- + Resistance to oil and condensation due to a magnetic detection principle
- + Impact resistance of 980 m/s^2 ($38,582.7 \text{ in./s}^2$)
- + Vibration resistance of 250 m/s^2 ($9,842.5 \text{ in./s}^2$)
- + High-accuracy machining achieved by the scale with the thermal expansion coefficient equivalent to the machine castings
- + Protection level of IP67 and bearingless non-contact structure for high reliability

Coolant chiller <Separate type> (Standard features)

Raised coolant temperature causes thermal displacement in the fixtures and workpiece, affecting the machining accuracy of the workpiece. Use this unit to prevent the coolant from heating up. When using oil-based coolant, the coolant temperature can become extremely high even with the standard coolant pump, so please be sure to select this unit.

**When using oil-based coolant or a super-high-pressure coolant system,
please be sure to consult our sales representative.**

● We cannot guarantee that this unit will completely control the coolant temperature. It is designed to help prevent oil temperature increases.

NTX 2500 3rd Generation / NTX 3000 3rd Generation

High-quality, high-performance spindle turnMASTER

3-year
spindle
warranty*

The in-house manufactured spindle with the company's long years of expertise and know-how delivers overwhelming performance in heavy-duty cutting that requires rigidity.

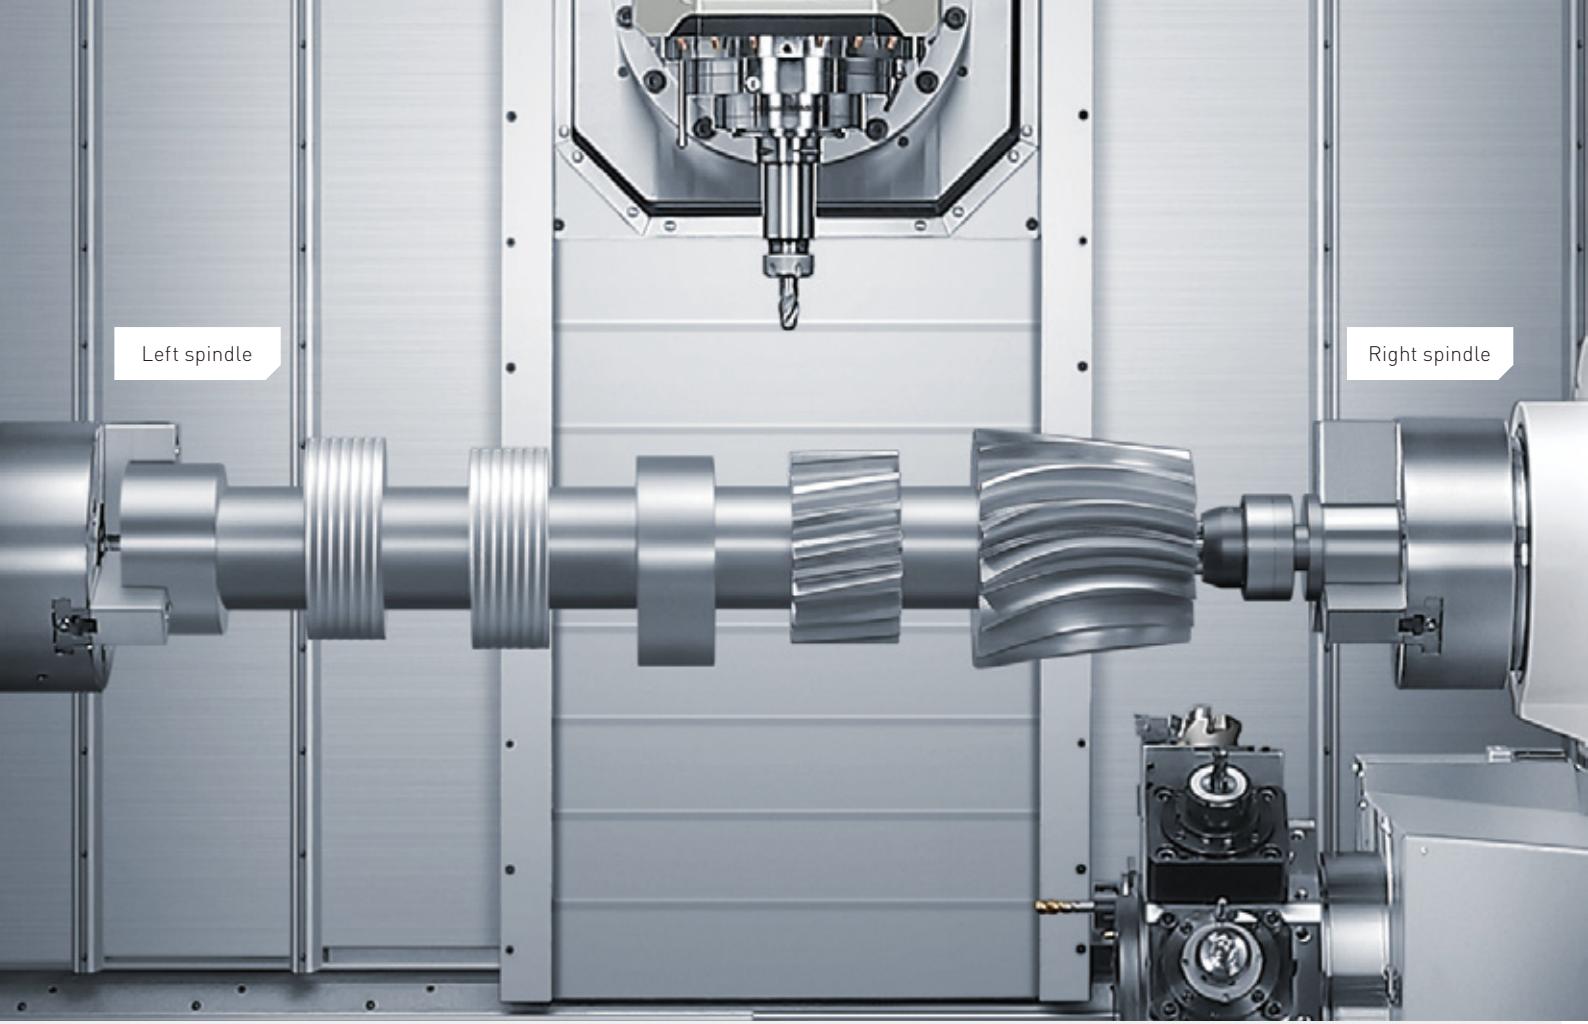

The high-performance spindle equipped with outstanding cutting capabilities and durability contributes to increasing your shop floor productivity.

* No operation hour limit

Sophisticated spindle labyrinth structure

- + More sophisticated labyrinth structure designed for frequent use of high-pressure coolant, and coolant ingress into the spindle prevented by featuring spindle air purge as standard, realizing high spindle durability

[Applications and Parts](#)[Highlights](#)[Machine and Technology](#)[Others](#)[Machine specifications](#)

NTX 2500 3rd Generation / NTX 3000 3rd Generation

The compactMASTER, the Most Compact Turn-mill Spindle in its class of only 350 mm (13.8 in.) with high rigidity

The high-rigidity spindle compactMASTER has a length of only 350 mm (13.8 in.) and is equipped with DDS (Direct Drive Spindle). Although very compact in size, compactMASTER can cover a large machining area and is able to handle a wide range of workpiece types. It is designed to increase your productivity by integrating your machining processes into one.

- + Turn-mill spindle utilizes Direct Drive Spindle (DDS)
- + Max. spindle speed: 12,000 min⁻¹, 20,000 min⁻¹
- + B-axis driven by a direct drive motor (DDM)
- + Full-closed loop control on B-axis <Scale feedback>
- + Highly rigid two-face contact specification: Capto C6, HSK-A63
- + Tool storage capacity: 38, 76, 114, 194, 246 tools
- + Max. tool diameter: ϕ 130 mm (ϕ 5.1 in.) <Without adjacent tools>, ϕ 70 mm (ϕ 2.7 in.) <With adjacent tools>

compactMASTER

The model employs new bearings effective for continuous high-speed rotations of the spindle tools, and the labyrinth structure is enhanced for heavy use of high-pressure coolant. The air purge is provided as standard to prevent coolant from entering the turn-mill spindle, ensuring high durability.

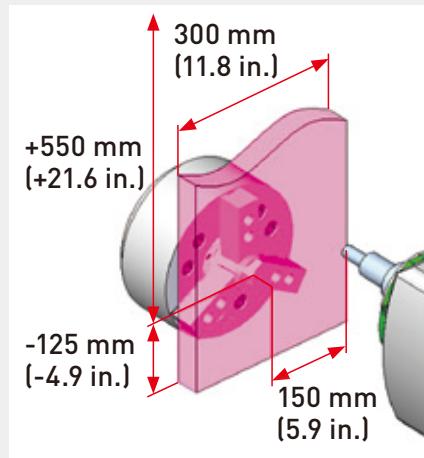

X-axis travel in the negative direction

Thanks to the 125 mm (4.9 in.) X-axis stroke in the negative direction, the spindle can accurately machine to the lower side of the chuck only with the linear axis and no polar coordinate interpolation. Machining can be done with the X- / Y- / Z- / B-axis, and no C-axis is used, so operators can create programs in the same way as they do for machining centers.

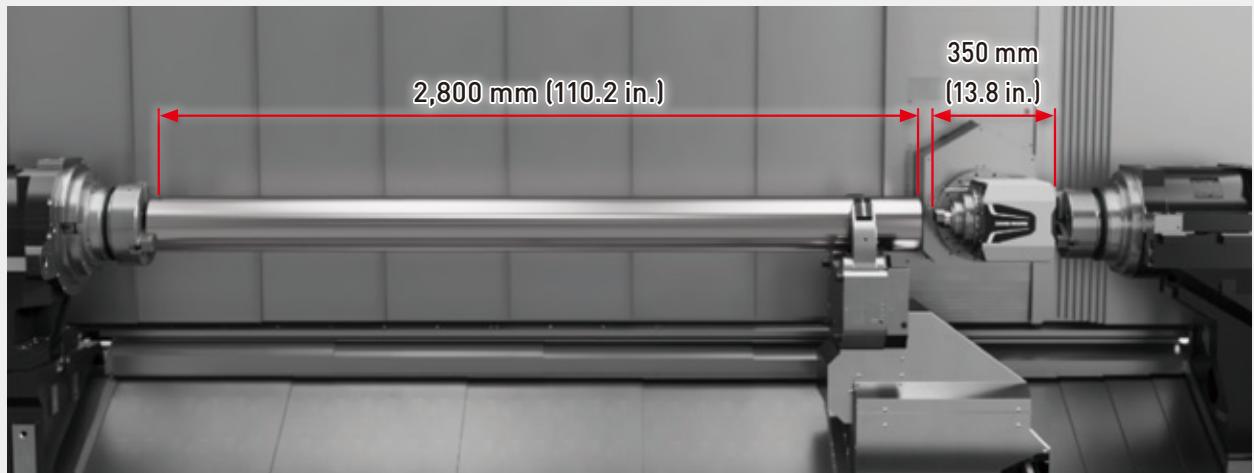

Workpiece samples: Housing
Workpiece size: $\phi 300$ mm ($\phi 11.8$ in.)
Machining possible without the C-axis

Compact turn-mill spindle with less interference inside the machining area of Turret 2

The turn-mill spindle has enough space for machining despite being located between the left and right spindle. The right spindle can retreat 250 mm (9.8 in.) from its home position, enabling end face machining up to a length of 2,800 mm (110.2 in.).

Zero backlash achieved by high-speed turning Direct Drive Motor

Transmitting the drive power directly to the rotary axes without using gears eliminates backlash. Compared with conventional worm gear systems, this dramatically improves transmission efficiency and offers high-speed feed.

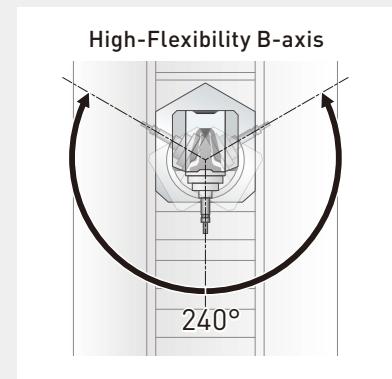

Effects of DDM

- + High-speed rotation
- + High-precision indexing
- + Less maintenance
- + Longer product life

DDM: Direct Drive Motor

NTX 2500 3000 NTX 3000 3000	
B-axis rotation range	240°
B-axis rotational speed min ⁻¹	100
Min. indexing increment	0.0001°

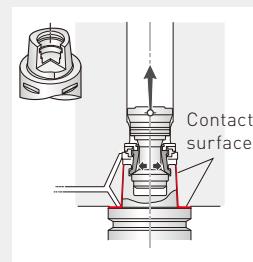

Two-face contact specification

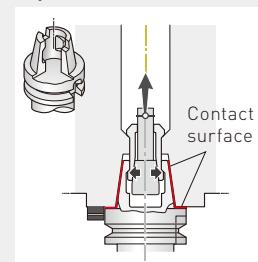

Flexural rigidity of tools has been improved by the contact with both the spindle taper and the end face. This extends tool life and improves cutting performance and machining accuracy.

● DMG MORI manufactures all the spindles in-house, including the two-face contact specification.

Function for supporting simultaneous 5-axis machining

SVC function <FANUC> / Advanced Surface (CYCLE832) <SIEMENS>

The SVC function reads the program commands for tool tip control in advance and performs automatic compensation to achieve smooth tool feed. The combination use with the DDM (Direct Drive Motor) ensures higher surface quality and shorter cycle time in 5-axis machining.

Motion of the SVC function

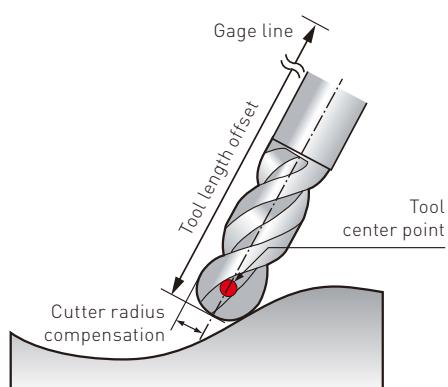

The SVC function includes the following functions:

- + AI contour control II
- + Nano smoothing II
- + Smooth TCP
- + G332 tolerance command

21

Tool center point (TCP) control <FANUC> / TRAORI <SIEMENS>

Main features

- + The tool path can be controlled from the tool center point.
- + No reprogramming is needed when the tool length and the tool diameter are changed.
- + NC automatically calculates cutter radius compensation and tool length offsets based on the program commands for tool tip control.

NTX 2500 3rd Generation / NTX 3000 3rd Generation

High-performance Turret 2 Broadens Machining Capabilities with Y-axis

By employing the high-performance Turret 2 (option) that combines technologies and expertise DMG MORI has cultivated through turning center development, the machine achieves efficient and flexible turning, secondary processing and rear machining and reduces cycle times.

The milling specification model is equipped with the BMT (built-in motor turret) which controls heat generation by jacket cooling, achieving outstanding machining accuracy.

The Y-axis specification with an axis travel of ± 40 mm (± 1.5 in.) is also available to allow for machining that has not been possible with the conventional Turret 2, thereby greatly contributing to cost reduction and greater competitive edge.

22

Turret 2 featuring BMT technology (Option)

- + Number of tool stations: 12, 10 tools
- + Max. milling spindle speed: 12,000 min⁻¹, 6,000 min⁻¹
- + The Y-axis specification (Option) with an axis travel of ± 40 mm (± 1.5 in.) offers hobbing with the turn-mill spindle and Turret 2 synchronized.

Large indexing diameter and tool holders for milling operation on the Right spindle side (Option)

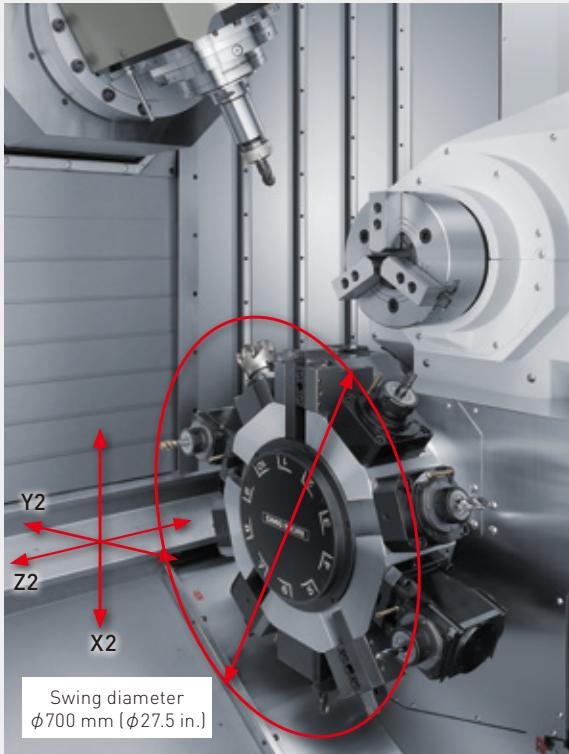

The 12-station turret with a swing diameter of 700 mm (27.5 in.) offers less interference with adjacent tools and achieves flexible tooling.

An end face milling holder can be mounted on Turret 2 to carry out end face milling on the Right spindle side, which leads to shorter cycle times.

Turret 2 with Y-axis (Option)

Turret 2 is equipped with a Y-axis.

The ± 40 mm (± 1.5 in.) axis travel enables not only machining with Turret 2, but also heavy-load hobbing with the synchronized turn-mill spindle and Turret 2.

"Mature" and "Evolved" BMT Technology <Turret 2 milling specification> (Option)

BMT: Built-in Motor Turret

The built-in structure, in which the motor is placed inside the turret, minimizes heat generation and vibration, improves transmission efficiency and significantly increases cutting power, speed and accuracy.

Effects of the BMT

- + Improved milling power
- + Improved milling accuracy
- + Controls the turret's heat and vibration
- + Reduced energy loss
- + Turret temperature increases: Compared with conventional machine 1/10 or less
- + Vibration amplitude: Compared with conventional machine 1/3 or less

Holders for existing machines can be used.

DMG MORI's holders are compatible with each other so that holders for existing machines can be used on a new machine.

Please consult our sales representative for more details.

Compatible holders

12-station Turret (Standard) : NTX 1000 2nd Generation, NTX 2000

10-station Turret (Option) : NT 4000 Series, NL Series

NTX 2500 3rd Generation / NTX 3000 3rd Generation

Cutting-edge Chip Disposal Solution

Chips can be one of the main causes leading to machining failure and machine stop.

DMG MORI conducted an in-depth study on them by carrying out various experiments and analyses, and achieved outstanding chip disposal performance.

We offer optimal chip disposal solutions according to a machining condition of each customer.

Coolant tank

The coolant tank can be pulled out to the front, minimizing the space for maintenance.

Handling of different types of chips and coolant filtration (Standard features)

With the hinge type conveyor for long chips and the cleats (Scrapers) on the hinge belt for short and fine chips, the conveyor can handle any type of chip regardless of size and material. The filter with the low-maintenance automatic washing function ensures high accuracy coolant filtration.

Hinge type + Drum filter type chip conveyor

Chip conveyor (Standard features)

- + Provides highly efficient chip disposal

Workpiece material and chip size		
	Steel	20 mm [0.8 in.]
Long		
Short		
Powdery		

Hinge type + Drum filter type

* Depending on chip size, chips may pass through the filter and the conveyor and accumulate in the coolant tank.
Due to possible effect on machining accuracy, a second filtration device may need to be considered.

- Please consult our sales representative if the chip length exceeds 200 mm [7.9 in.].

● [Chip size criteria] Powdery: minute particles / Short: 50 mm [2.0 in.] or less in length, ϕ 40 mm [ϕ 1.6 in.] or less in diameter (A lump of chips) / Long: over 50 mm [2.0 in.]

Chip flushing coolant

The standard chip flush coolant ensures better chip disposal directly beneath the spindle.

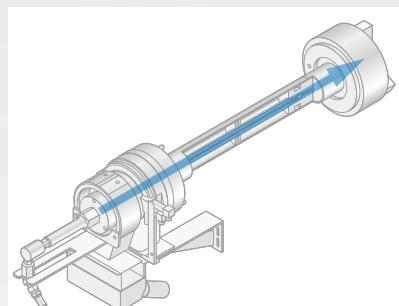

Shower coolant

Washes chips off the machining chamber walls & allows them to flow smoothly into the chip conveyor.

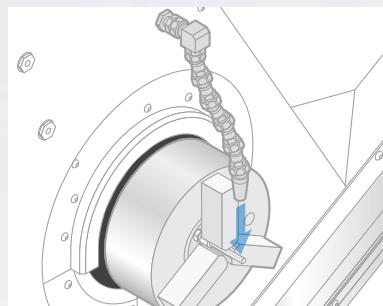

Through-spindle coolant system <Spindle1, 2> (Option)

Coolant supplied through the center of the chuck removes chips generated during I.D. machining.

Coolant in upper part of chuck (Option)

Coolant supplied from above the chuck removes chips and minimizes heat generation in the workpiece.

Through-spindle coolant system <Turn-mill spindle>

- + Coolant to be supplied to the tip through the holes of the spindle and tool
- + Effective for chip removal, cooling of machining points and extension of tool life

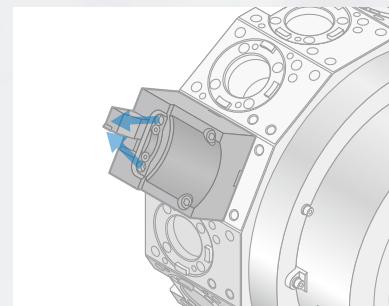

Center through

 Flammable coolant such as oil-based coolant has a high risk of ignition, and will cause fire or machine breakage if ignited. If you have to use a flammable coolant for any reason, please be sure to consult our sales representative.

Air blow <Tool tip> (Option)

Air is blown toward the tool tip to blow away chips adhering to the tool.

○: Suitable △: Consideration required —: Not suitable

Workpiece material and chip size				
Cast iron		Aluminum, non-ferrous metal		
Short	Powdery	Long	Short	Powdery
				
○	△*	○	○	△*

- The options table shows the general options when using coolant. Changes may be necessary if you are not using coolant, or depending on the amount of coolant, compatibility with machines, or the specifications required.
- Please select a chip conveyor to suit the shape of your chips. When using special or difficult-to-cut material (Chip hardness HRC45 or higher), please consult our sales representative.
- Chip conveyors are available in various types for handling chips of different shape and material. For details, please consult our sales representative.

Unique Solutions against Chip, Coolant, Mist Troubles to Advance Process Integration & Automation

Chips, coolant, and mist generated during machining can cause severe machine troubles and are major hindrances to automation.

The NTX 2500 3rd Generation / NTX 3000 3rd Generation adopt state-of-the-art technology to eliminate such problems, enabling long unmanned machine utilization for maximized automation effects.

- 3 machining troubles: Cutting chips, coolant, and mist hinder stable and continuous production and deteriorate the factory environment.

zero-sludgeCOOLANT pro

Access here for the video

Innovative Vertical Coolant Tank

The newly developed vertical coolant tank is compact in size, energy-saving and offers high capacity. This makes it the optimal coolant solution for continuous operation of highly productive automation systems.

1. For continuous unmanned operation over long periods

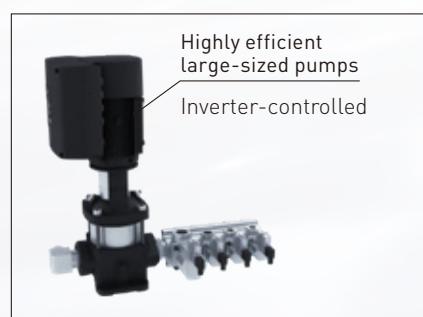

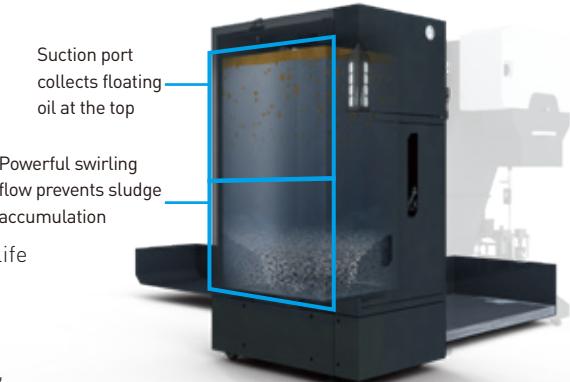

- + Use of innovative large-capacity vertical coolant tank
- + Coolant capacity: 1,460 L (385.4 gal.)
<183% more than previous model>
- + Hybrid cleaning method against chip accumulation

2. Coolant tank with less cleaning

- + The deep vertical tank automatically separates oil and sludge by weight
- + The efficient collection of sludge and oil extends coolant life and significantly reduces the tank cleaning frequency

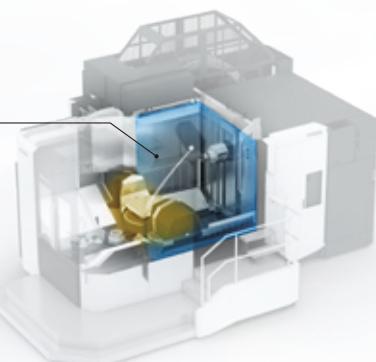

3. Energy-saving

- + Newly equipped with highly efficient large-sized pumps & control valves for high-volume coolant cleaning
- + Inverter adjusts pump to control flow rate and save energy

1. 260 L/min (68.6 gpm) High-volume coolant cleaning

- + In-machine cover washing against chip accumulation

**Max. discharge pressure 10.0 MPa (1,450 psi) <variable pressure>
High-pressure through-spindle coolant system***

- + Discharge pressure can be set for individual tools via command
<1.0 to 10.0 MPa (145 to 1,450 psi)>
- + Pressure feedback and inverter control significantly reduce power consumption and coolant heat generation
- + Enables lean chip removal optimized to machining contents

* Option

zeroFOG^{*1}

CLEAN

- + Air quality comparable to household air purifiers
Mist collection efficiency over 99.97% for 0.3 µm particles
- + Stable collection performance realized by filter clogging monitoring and automatic motor control^{*3}

Mist collection efficiency of 99.97% or more^{*2}

COMPACT

- + Attachable to the machine body^{*4}.
No additional floor space necessary.
Unified design concept with the machine

High maintainability

- + Frequent filter cleaning no longer necessary.
Automatic cleaning of the primary filter prevents filter clogging
- + Notification of filter exchange timing

ENERGY-SAVING

- + Contribution to SDGs:
less energy consumption and carbon emission

*1 Option

*2 zeroFOG collects fine particles of 0.3 µm.

*3 Airflow may decrease depending on operating conditions such as mist concentration, oil type, and machining details.

*4 The method of mounting on the machine varies depending on the model and specifications.

Access here for the video

NTX 2500 3rd Generation / NTX 3000 3rd Generation

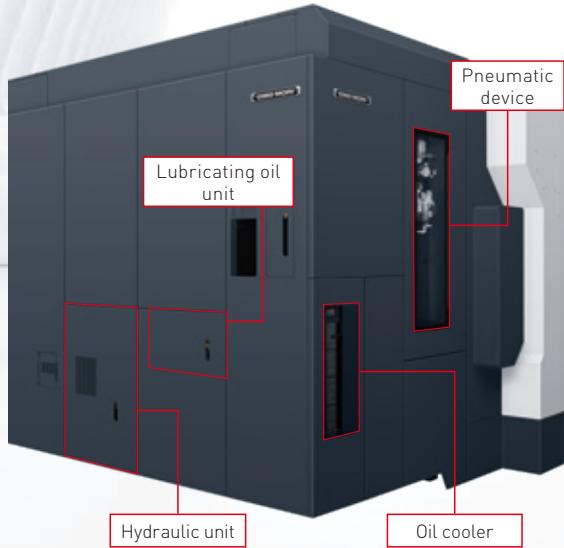

Pursuit of Usability

The NTX 2500 3rd Generation / NTX 3000 3rd Generation machines are designed with the highest priority on operator usability.

The usability-focused approach can be seen throughout the machine design, which includes a larger window for greater visibility, and the hydraulic units and other devices in an easily accessible location for better maintainability.

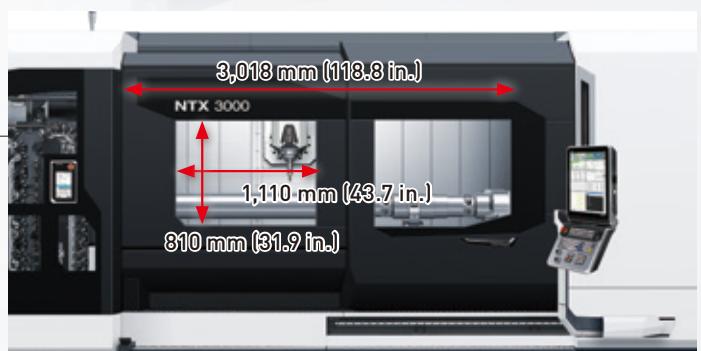

1 Maintenance points in one location for easy access

The equipment layout is designed for daily operation and maintenance.

2 Two doors with excellent visibility, automatic door as standard for improved operability

- + Door opening width:
3,018 mm (118.8 in.)
- + Window size:
810 mm (31.9 in.) <height>
× 1,110 mm (43.7 in.) <width>

3 Tool magazine for improved workability

The tool magazine is located at the machine front to enable tool checking at the machine operation position and tool changes in front of the machine. Moreover, operators can easily remove tools by simply pressing a button. The tool magazines with storage capacity of 76 tools (Double chain type) and 114 tools (Triple chain type) are especially suitable for customers who want to attach / detach tools while one magazine is rotating.

In addition, with the magazine operation panel (optional), all operations necessary for tool setup can be performed from the magazine side, reducing operators' work time.

Wide-opening magazine door

Tool removal with a single push of a button

7-inch touch panel

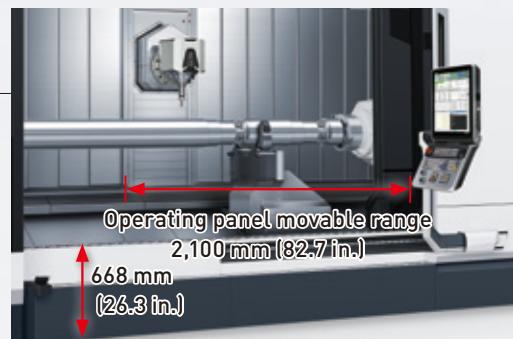

Find a video about the magazine operation panel here.

● Photo: Right spindle specifications

5 CELOS / ERGOline Touch with Superior Operability

The movable, swivel touch-screen operation panel can move 2,100 mm [82.7 in.] in both the left and right directions to ensure better accessibility to the spindle and the workpiece.

NTX 2500 3rd Generation / NTX 3000 3rd Generation

Various Solutions to Meet Your Needs

DMG MORI offers a variety of automation systems such as robot systems and bar feeder systems, as well as various functions to support automation. Automation systems make it possible to complete full processes from loading of materials to unloading of finished products on a single machine and reduce non-cutting time, thereby contributing to higher profitability.

Large capacity magazine (194 or 246 tools)

DMG MORI provides flexible solutions such as the large capacity magazine to respond to the increasing high-mix low-volume production of customers. Despite its large capacity, the space-saving design of the tool magazine makes it ideal for automated systems. A bar feeder can also be attached for automatic material loading.

Steady rest

Up to 2 automatic steady rests can be utilized for machining of long workpieces.

According to the machining contents, it is also possible to mount a steady rest on Turret 2.

Turret 2 type

- **SLU-X1**
 $\phi 6 - \phi 70$ mm ($\phi 0.23 - \phi 2.7$ in.)
- **SLU-X2**
 $\phi 8 - \phi 101$ mm ($\phi 0.31 - \phi 3.9$ in.)
- **SLU-X3.1**
 $\phi 20 - \phi 165$ mm ($\phi 0.7 - \phi 6.4$ in.)
- **SLU-X3.2**
 $\phi 50 - \phi 200$ mm ($\phi 1.9 - \phi 7.8$ in.)

Programmable

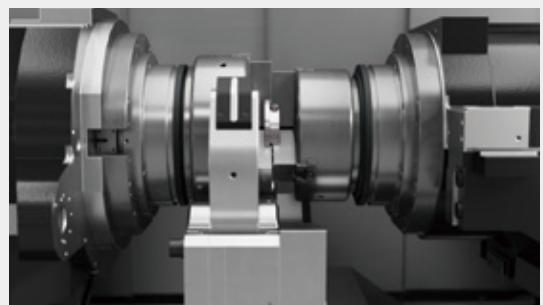

- **SLU-X1** $\phi 6 - \phi 70$ mm ($\phi 0.23 - \phi 2.7$ in.)
- **SLU-X2** $\phi 8 - \phi 101$ mm ($\phi 0.31 - \phi 3.9$ in.)
- **SLU-X3.1** $\phi 20 - \phi 165$ mm ($\phi 0.7 - \phi 6.4$ in.)
- **SLU-X3.2** $\phi 50 - \phi 200$ mm ($\phi 1.9 - \phi 7.8$ in.)
- **SLU-X4** $\phi 30 - \phi 245$ mm ($\phi 1.1 - \phi 9.6$ in.)
- **RX3** $\phi 20 - \phi 270$ mm ($\phi 0.7 - \phi 10.6$ in.)
- **RX4** $\phi 35 - \phi 340$ mm ($\phi 1.3 - \phi 13.3$ in.)
- **RX5** $\phi 75 - \phi 430$ mm ($\phi 2.9 - \phi 16.9$ in.)
- **RX6** $\phi 100 - \phi 520$ mm ($\phi 3.9 - \phi 20.4$ in.)

Workpiece transfer

The indexing function of the turret and the retreat function of the steady rest enable workpiece transfer without removal of any unit for continuous machining of the first and second process.

When a steady rest of type RX4 or higher is used, the steady rest can retreat while remaining open, and workpiece transfer can be carried out.

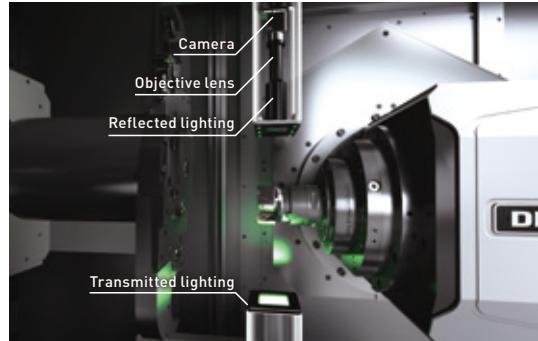

Tool Visualizer

- + Automatic on-machine measurement of tool geometry and setting of tool compensation
- + Detection of drill breakage and chip winding
- + Automatic image capture of tool edge during ATC and manual wear measurement for tool life management
- + Creation of tool model data for interference check, data imported into the interference check function

Find detailed information on
Tool Visualizer here.

In-machine measuring system (Standard features)

A touch sensor is attached to the turn-mill spindle to ensure a machined workpiece.

3D quickSET (Option)

It corrects the rotation center deviation of a rotary axis and the positional deviation caused by thermal displacement or aging of a machine.

Automatic in-machine tool presetter (Standard features)

It simplifies complex setup work after changing tools. Tool breakage detection is also possible by the comparison of measured values and setting values.

Bar feeder system (Option) <Consultation is required>

Non-stop machining of bar material

Recommended accessories for bar feeder specification

- | | |
|-----------------|------------------|
| + Bar feeder | + Guide bushing |
| + Multi counter | + Work stopper |
| + Signal lamp | + Mist collector |

NTX 2500 3rd Generation / NTX 3000 3rd Generation

DMG MORI Qualified Products One-stop Service for Various Needs

The DMG MORI Qualified Products [DMQP] program <Option> is designed to certify peripherals that meet DMG MORI standards in quality, performance and maintainability.

DMG MORI collaborates with our partners in the world and provides customers with peripherals required for their machining. We take care of the arrangement from selection to installation to support best-quality machining.

DMG MORI helps customers improve productivity by offering the total solutions including quality peripherals as well as machine tools.

Find detailed information
on DMQP here.

- + Offer peripheral equipment optimal for each customer at one stop
- + Provide support including connection and setup of machines and peripheral equipment
- + Achieve efficient connections with optimal interfaces

Four DMQP categories

Handling

Robot system

NTX 2500 3rd Generation / NTX 3000 3rd Generation

DMG MORI Technology Cycles

Technology Cycles (Option) are total solutions that achieve complex machining easily in a short time. They enable every operator to easily perform high-quality machining, setups and measurement with general-purpose machine tools and standard tools / fixtures, which used to be done with specialized machines, programs and tools.

Find detailed information on
Technology Cycles here.

- The availability of the functions differ depending on the machine. For details, please consult our sales representative.
- The above is an image picture.

Respond to Various Technology Cycles

Shaping

Gear hobbing^{*1}

Optimal programming achieves hobbing with a general-purpose machine

Efficient High-precision

Find detailed information on Gear hobbing here.

Issue (Before introduction)

*2

- + A gear machine is needed. After blank machining with a turning machine, gear machining needs to be performed with a gear machine after setup changes
- + Want to extend the tool life of expensive hob cutter

Results (After introduction)

- + Hobbing program can be easily created by conversational input

- + Hob cutter's machining position can be changed, maximizing the tool life

- + Consolidation of machining operations into the general-purpose machine reduces setup time and enhances accuracy such as concentricity due to no setup change

*1 Consultation is required

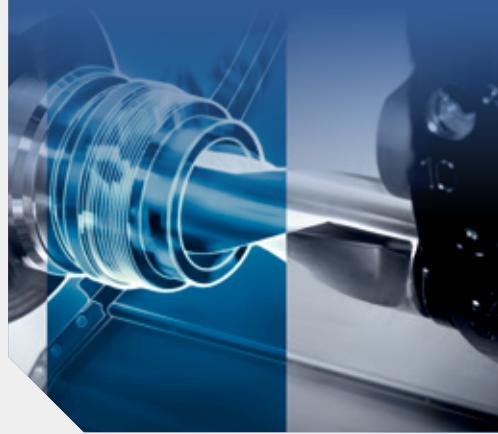

*2 <Reference> Wikipedia: Hobbing; <https://ja.wikipedia.org/wiki/%E3%83%9B%E3%83%96%E7%9B%A4> (Quoted on August 29, 2023)

Monitoring

Easy tool monitoring

Monitoring load of spindle and traveling axes

 Efficient  Safe

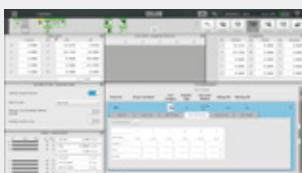

Issue (Before introduction)

- + Abundant experience is needed to set cutting conditions
- + Want to prevent tool breakage and machine failure
- + Difficult to monitor load to the spindle and tools at all times

Results (After introduction)

- + Conditions can be set in advance, enabling digital cutting management not dependent on experience or expertise
- + Can reduce tool breakage and maintenance cost by maximizing the capacities of the tools and machine
- + Load to the traveling axis and spindle during machining is monitored at all times, and the machine stops when abnormal values are detected

Handling

Multi-tool

Maximizing number of tools & minimizing non-cutting time

 Efficient

Issue (Before introduction)

- + Models with the Y-axis or Right spindle specification require tools for various cutting operations
- + More than one tool is mounted to one station in some cases, making their management complex
- + Including spare tools, it is necessary to prepare more tools than the number of turret stations

Results (After introduction)

- + Tool compensation setting and life management can be easily performed for multiple tools of each station
- + Operator can set optimum tool information for each tool and maximize the number of tools
- + Prevent tool breakage and enhance production efficiency by switching to spare tools according to the operating time of the set tool

Handling

Alternating speed

Stable machining in which chatter hardly occurs

 Efficient
 High-precision

Issue (Before introduction)

- + Chatter occurs when using tools under its recommended conditions
- + Vibration in deep hole drilling using a long drill should be suppressed

Results (After introduction)

- + Cutting resistance is changed by periodically changing the rotation speed of the spindle. This helps suppress chatter and enhance cutting conditions, which lead to shorter machining time
- + Surface quality is improved

Find detailed information on Alternating speed here.

Shaping

Multi-threading 2.0^{*1}

Cutting special thread

 Efficient

Issue (Before introduction)

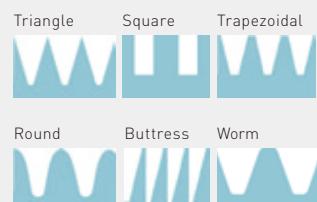

- + Hope to cut special thread shapes
- + Hope to simplify complicated programming

Results (After introduction)

- + Easily create various thread shapes by conversational programming
- + Create a machining program of a special shape thread on the machine without CAD / CAM
- + Worm machining with involute curve tooth profile^{*2} is also available

Find detailed information on Multi-threading 2.0 here.

* Consultation is required

* Equivalent to JIS B 1723 Type 4 (DIN 3975 Z1)

Shaping

Excentric machining*

Find detailed information on Excentric machining here.

Easy programming of excentric machining

- + Reduce setup time by consolidating machining operations performed with a special machine into a general-purpose machine
- + Complicated program for excentric machining can be created using the conversational programming style
- + Compatible with both turning and milling to achieve efficient machining
- + Require no eccentric machining jigs

Shaping

gearSKIVING*

Find detailed information on gearSKIVING here.

High-speed gear cutting including internal teeth

- + Can easily program a machining technique called gear skiving
- + Internal teeth that cannot be machined by hobbing can be cut
- + Consolidation of processing operations into the general-purpose machine reduces setup time and enhances accuracy such as concentricity due to no setup change

Shaping

Keyway broaching

Find a video about Keyway broaching here.

Complete keyway broaching process integrated into one machine

- + Easy programming supported by guidance screen
- + Inner diameter keyway broaching also possible
- + Lower potential for interference than end milling
- + Includes programming for chamfering
- + Y-axis shift function enables various keyway sizes with a one size insert

Shaping

Polygon Cutting

Find a video about Polygon Cutting here.

Highly efficient cutting of polygons

- + Easy programming supported by guidance screen
- + Faster cutting time than end milling
- + Lower potential for interference than end milling
- + Chamfering possible with just one tool

Handling

Retraction cycle

Automation allows for easy return to the zero return position without errors

- + Operational efficiency is enhanced, as one button push will enable return to the zero return position in the preset order
- + Can customize the order of axes to be moved according to the condition
- + Enhance efficiency of setup operation
- + Reduce the risk of accident

Shaping

Efficient Production Package (High-speed canned cycle)

Easy inputting of various machining patterns

- + A program will be automatically created just by entering a complex shape in a conversational style
- + Safe cutting is ensured by confirming cutting details using the simulation function
- + Optimal tool path and cutting conditions enhance cutting quality

Shaping

Interpolation turning

Find detailed information on
Interpolation turning here.

Easy programming of interpolation turning

- + Interpolation turning can be programmed using the conversational programming style
- + O-ring groove and sealing surface can be cut
- + Tuning process can be performed at the eccentric position in one chucking, enabling process integration

Shaping

DMG MORI gearMILL*

Find detailed information on
DMG MORI gearMILL here.

Integrating gear cutting into Turning / Milling

- + PC software for gear cutting
- + All processes of Turning, Milling, and gear cutting are done on one machine
- + Investment cost can be reduced by use of commercially available tools and general purpose machines

Shaping

Simultaneous 5-axis machining

Most suited for simultaneous 5-axis control machining

- + Tool center point (TCP) control
- + Workpiece setting error offset
- + Tool radius offset for 5-axis control machining
- + High-speed, high-precision machining II
- + Tilted Working Plane Command
- + SSS Control package

High precision

Measuring

3D quickSET

Easy offset of deviation of rotary / Tilted axes on 5-axis control machine

- + Automatic offset with the dedicated program
- + Easy programming in accordance with guidance
- + Possible to offset even while fixtures and workpieces are being mounted*
- + Higher accuracy by minimized deviation of rotary / Tilted axes

Find detailed information on
3D quickSET here.

High precision

*Be cautious about interference which may occur depending on the mounting position of the calibration sphere

Handling

Application Tuning Cycle

Easy setting of optimum feed according to the machining operation

- + Only by selecting either the time priority mode or accuracy priority mode, smoothness of look-ahead interpolation can be changed
- + Feedrate can be changed freely while programs are running, and optimum machining method can be set according to surfaces to be machined

Efficient

Handling

Tailstock for turret

Find detailed information on
Tailstock for turret here.

Efficient

Support for programming of the tailstock operation when the tailstock is mounted on Turret 2

- + Simple operation by the guidance screen
 - Setting of tailstock pressures
 - Tailstock movement from the retract position to approach position, and then the workpiece support position
 - Tailstock retraction

Handling

Steady rest for turret

Find detailed information on
Steady rest for turret here.

Efficient

Support for programming of the steady rest operation
when the automatic centering steady rest is mounted on Turret 2

- + Approach and clamp / unclamp of steady rest can be executed
in the same cycle

Handling

Counter spindle tip

Efficient

Support for programming when Right spindle is used as a tailstock for long workpieces

- + Simple operation by the guidance screen
 - Setting of tailstock pressures
 - Tailstock movement from the retract position to approach position, and then the workpiece support position
 - Tailstock retraction
 - Calling the center from the magazine and chucking it to the right spindle

Monitoring

MVC (Machine Vibration Control)

Find detailed information on
MVC here.

Efficient

Vibration data of the spindle-mounted sensor analyzed to
suggest optimal conditions for preventing chatter on the screen

- + Automatic calculation of efficient cutting conditions for preventing chatter
- + Quick and easy reflection of recommended cutting conditions to a program
- + Less time and effort because optimal conditions can be determined by one trial machining

Monitoring

MPC (Machine Protection Control)

Turn-mill spindle vibration detected by the sensor

- + Preventive maintenance by regular diagnosis of bearings
- + Detection of subtle changes in vibration caused by tool chipping
- + Quick stop when excessive vibration is detected
- + Minimized load on the spindle at the time of interference

Safe

NTX 2500 3rd Generation / NTX 3000 3rd Generation

ERGOLine X with CELOS X Smooth and Time-saving Operation

The refined ergonomic design ensures easy usage down to the smallest detail.

The dustproof and waterproof design (IP54 rating) is ideal for factory environments and realizes comfortable and safe operation.

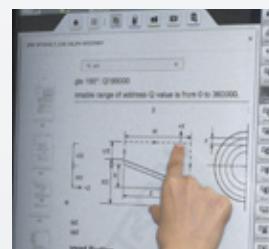

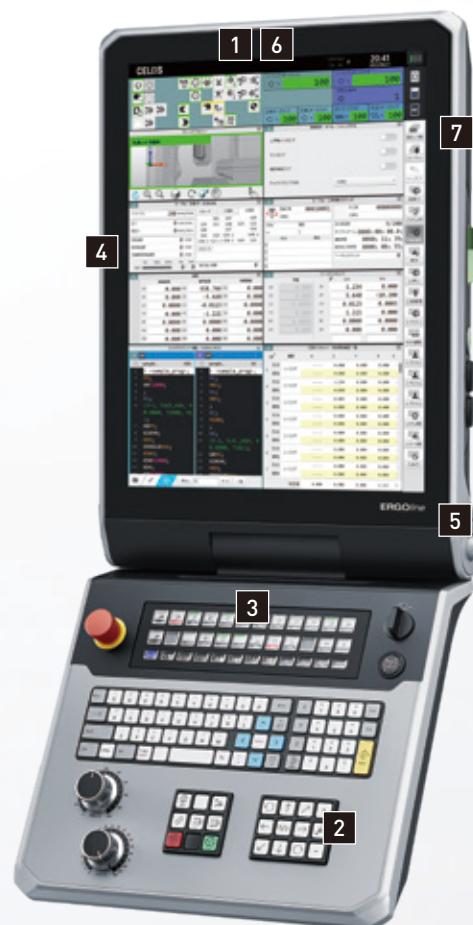

(CE Marking acquired for European safety standards)

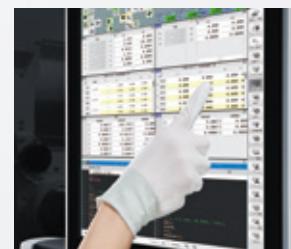

- 1** Large touch screen
Superior visibility and intuitive operation.

- + 10% larger screen and increased text size
- + All necessary information displayed on one screen for higher work efficiency
- + Remote access: machining programs on office PCs are visible on the shop floor as well
- + Can also be operated with touch pen*

* Option

Electrostatic touch panel

Can also be operated with gloves on

- 2** Hardware buttons that are easy to press Ideal for program input where accuracy is required.

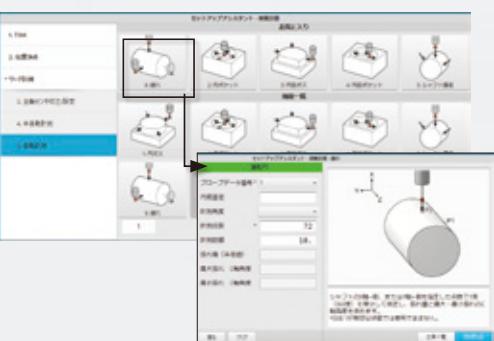

- + Dustproof, waterproof and durable design
- + Optimized button ergonomics for comfort pressing

- 4** Useful applications that reinforce your production processes

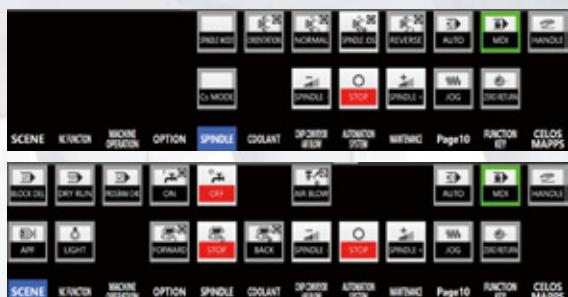

- 6** Simple input screen for smooth completion of setup

- + Easy-to-understand animations and diagrams guide you through the setup
- + For tool change, simply select a tool from the list
- + Enables anybody to safely perform tool change or measuring
- + Significantly reduces setup time

3 HYBRID BAR

Only displays the buttons that are necessary for the current operation. Prevents errors and improves workability.

Example of displayed buttons

- + Switches displayed buttons automatically to suit your current operation
- + LCD panel with comfortable push sensation
- + Synchronized with open programs on the touch screen

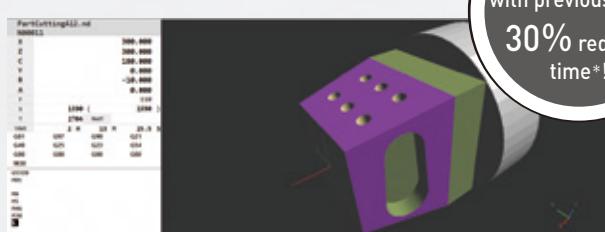

- 5** Upper and lower panel can be adjusted to your optimal viewing angle Operate the machine in your most comfortable position by adjusting the panel angles.

- + Upper panel: Front 10° , Back 20°
- + Lower panel: 0 to 84°
(adjustable in 7 steps at 12° each)

- 7** Drawing and complex machining simulations are processed in high speed.

- + CPU: Intel Core i5
- + Memory 32 GB
- + 6 GB program storage area
- + USB 2 ports

Drawing simulation

* Based on actual results. Figure may differ depending on the machining program.

NTX 2500 3rd Generation / NTX 3000 3rd Generation

Digital Solutions Promoting the Digital Transformation of Your Shopfloor

DMG MORI's digital solutions visualize production-related information and eliminate inefficient work. The power of digital technology supports workers on the shopfloor, improving overall productivity and promoting work style innovation.

Digital Transformation of programming Program Creation in CAD / CAM

- + Ideal for machining complex shapes with 5-axis machines and mill-turn centers
- + Toolpath optimization increases machining efficiency and accuracy
- + Post processor translation ensures easy programming with different NC controls
- + DMG MORI proposes the optimal CAM for each customer's needs

CELOS DYNAMICpost^{*1}

Access here for the video

Post Processor / NC Simulation / Cutting Force Optimization
integrated in one software
Reliable bridge between CAM and machine tools

- + DMG MORI post processors maximize machine capacity
- + Interference check for safe and secure processing
- + Cutting force optimization reduces cutting time by 20% ^{*2} and tool breakage during roughing
- + Free trial available

^{*1} Option^{*2} Listed figures may not be achieved depending on the type of machining.

Supports the digitization of your factory.
Eliminates all redundancies from your shopfloor.

- + Easily create work procedure manuals with applications and make your shopfloor paperless
- + Real-time visualization of on-site production processes
- + Linkage with existing internal systems to manage data in one place

Access here for the detail of TULIP

MESSENGER

Visualize machine conditions that were previously unknown. Share information in the team and derive concrete measures for improvement

- + View the machine operation status in real-time
- + Check the operation status history
- + Visualized operation rates help you to improve production processes
- + Email notifications for alarms and job completion

Access here for the video

NETservice

Quickly recover from any problems!

- + DMG MORI's service engineer can check your machine remotely*
- + Quick and accurate understanding of your machine status
- + Minimizes machine downtime

* DMG MORI's service engineer will only access your machine based on your request.

Robust security

Securely connect machines to the network and prevent problems and accidents caused by cyber attacks.

- + Only executes programs registered in the whitelist to prevent malicious programs
- + Prevents virus infection through machine bodies by blocking the execution of malicious programs in the first place

Whitelist security software

NTX 2500 3rd Generation / NTX 3000 3rd Generation

Network Construction and Connection Services for Factories DMG MORI GATEWAY

Access here for the video

46

DMG MORI GATEWAY provides a one-stop cloud connection for machines of all makes and ages, allowing you to monitor the shop floor status in real time.

The implementation requires no effort on the part of customers and can be completed by DMG MORI engineers. The IoT-based, real-time shop floor visualization will help you make better business decisions and maximize production efficiency.

DMG MORI GATEWAY

Connectable to third-party machines and peripherals

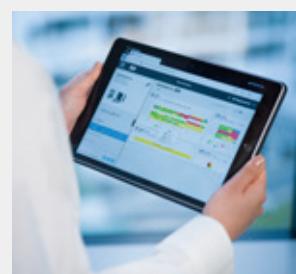

Data stored in the DMG MORI cloud

Shop floor network built by DMG MORI engineers

Data accessible from PCs, tablets, and smartphones

• DMG MORI GATEWAY service is available only in Japan. [As of September 2023] We plan to begin offering this service for overseas markets in due course.

Your Contact for After-sales and Service: my DMG MORI

Access here for the video

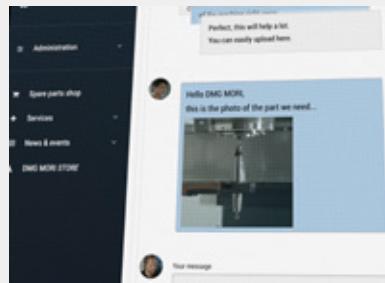

47

my DMG MORI is a web-based platform that facilitates communication between customers and DMG MORI during repair and maintenance work.

Unlike phone calls, the digital communication allows both parties to exchange detailed information. You can also view the updated status and history anytime, anywhere.

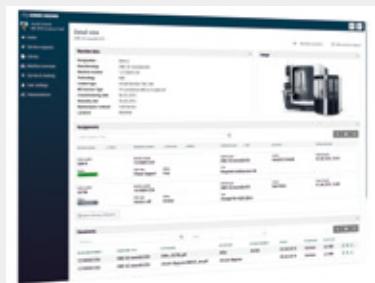

MORE SERVICE

- + No queue: Simple online problem description
- + Pre-filled service inquiries: Send machine details, photos or videos
- + Immediate processing: The "right" service expert will process the inquiry with priority

MORE KNOWLEDGE

- + Full machine history: All machine events are retrievable in a structured format
- + All documents digital: Library for technical and commercial documents available
- + Real-time access to processing status: More transparency for service and spare part inquiries

MORE AVAILABILITY

- + Free access, 24/7: From anywhere, at any time
- + Your portal, your rules: The customer controls who sees what
- + On any device: Computer, Smart-phone or via CELOS

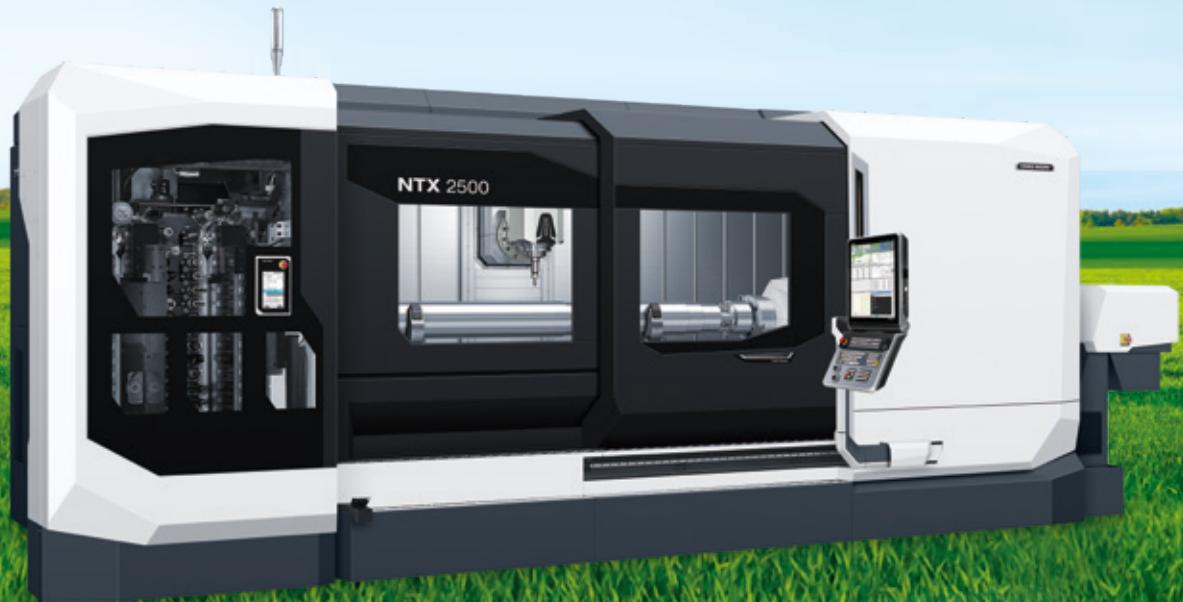

DMG MORI Achieved Carbon Neutral Production Worldwide

We achieved carbon neutrality throughout the entire production process from parts procurement to product shipment. As a proof of being produced carbon neutral, our products are shipped with the "GREENMACHINE" mark on them.

Scan the QR code for DMG MORI's approach towards sustainability.

<https://www.dmgmori.co.jp/corporate/sustainability/en/>

100% CLIMATE NEUTRAL MACHINE MANUFACTURING

NEUTRAL PRODUCT CARBON FOOTPRINT

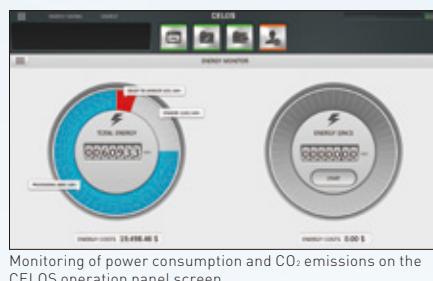

NEUTRAL COMPANY CARBON FOOTPRINT

SUPPLIERS + **DMG MORI**

Unique energy-saving function **GREENMODE**

GREENMODE, an energy-saving function developed to achieve the Sustainable Development Goals (SDGs), significantly reduces your machine's power consumption by keeping standby power low and by shortening machining times through efficient machining programs.

GREENMODE

GREEN monitoring

- + Visualize power consumption and CO₂ emission amount on the CELOS operation screen

GREEN device

- + High-brightness LED light

GREEN idle reduction

- + Shuts off power to servo motors, spindles, coolant pumps, etc. when the machine is stopped
- + Turns off the operation panel screen when there is no machine operation for a certain period of time

GREEN control

- + Reduce machining power by energy-saving pecking cycles
- + Quicken standard M codes
- + Simultaneous acceleration / deceleration of the spindle and feed axes
- + Controls coolant discharge amount with inverter

Contributing to sustainable production

Reducing CO₂ by 5-axis machining, process integration and automation

5-axis machines and automation systems reduce lead times with highly efficient production.

They also contribute to less CO₂ emissions and power consumption and improve customers' productivity.

MACHINE UTILIZATION

MORE EFFICIENT ENERGY AND EMISSIONS MACHINE OPERATION

1. CELOS apps for transparency and optimization of energy consumption
2. Intelligent, demand-oriented control
3. Consumption-optimized components
4. Energy recovery during braking

TECHNOLOGY EXCELLENCE FOR GREEN TECHNOLOGIES

1. Green technologies like wind power and electromobility are the most important leverage against climate change
2. DMG MORI is the innovation driver for the production of green technologies

* DMQP (DMG MORI Qualified Products)

*1 Traveling in clamped state during machining is not possible.

*2 Not available for Turret 2 with the milling function.

*3 In-machine tool presetters are available for both left and right spindles. Please contact us for more information.

*4 When the tool breakage detector is selected, the in-machine tool presetter (automatic) is not available.

*5 Please note that there are a few countries where the radiowave type cannot be used because no radiowave license in those countries has been obtained yet.

For further details, please consult our sales representative.

● DMQP: Please see Page 32 for details.

● The information in this catalog is valid as of July 2024.

● Specifications, accessories, safety device and function are available upon request.

● Some options are not available in particular regions. For details, please consult our sales representative.

 Flammable coolant such as oil-based coolant has a high risk of ignition, and will cause fire or machine breakage if ignited.

If you have to use a flammable coolant for any reason, please be sure to consult our sales representative.

<Precautions for Machine Relocation>

This product is deemed regulated cargo when exported under the Japanese government's Foreign Exchange and Foreign Control Trade Law. Government authorization is required when exporting this product. The product shipped to you (the machine and accessory equipment) has been manufactured in accordance with the laws and standards that prevail in the relevant country or region. If it is exported, sold, or relocated to a destination in a country with different laws or standards, it may be subject to export restrictions of that country.

This product detects machine relocation. Once the machine is relocated, it is not operable unless its legitimate relocation is confirmed by DMG MORI or its distributor representative. If the restart of the machine can result in unauthorized export of cargo or technology or will violate legitimate export controls, DMG MORI and its distributor representative can refuse to restart the machine. In that case, DMG MORI and its distributor representative do not assume any loss due to the inability to operate the machine or any liability during the warranty period.
